traplinked
innovating pest control

Integrations & API Setup

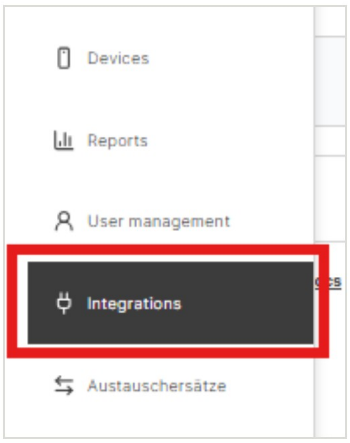

PREREQUISITE

Interfaces can only be set up in the **web version** of the traplinked App.

1 Open Integrations — sidebar

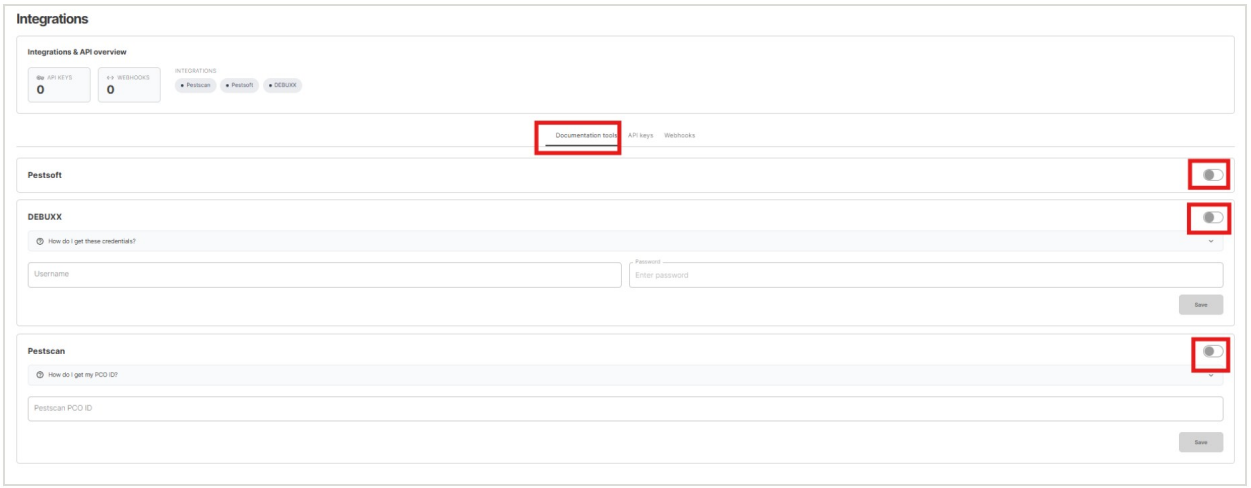

Log in to the web version of the traplinked App. In the **sidebar** on the left, select “Integrations”.

Open web app → Sidebar → Integrations

2 Activate a documentation tool — toggle

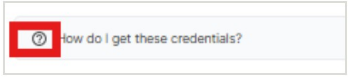

The “Documentation tools” tab opens directly, listing the preselected tools, e.g. Pestsoft, DEBUXX and Pestscan. Which **documentation tool** do you want to work with? Switch it on or off using the toggle on the right.

3 Enter credentials — info note “?”

Some tools need additional details, such as a username and password (DEBUXX) or a PCO ID (Pestscan). What you need to enter and where to get it is explained in the tool’s **info note “?”**.

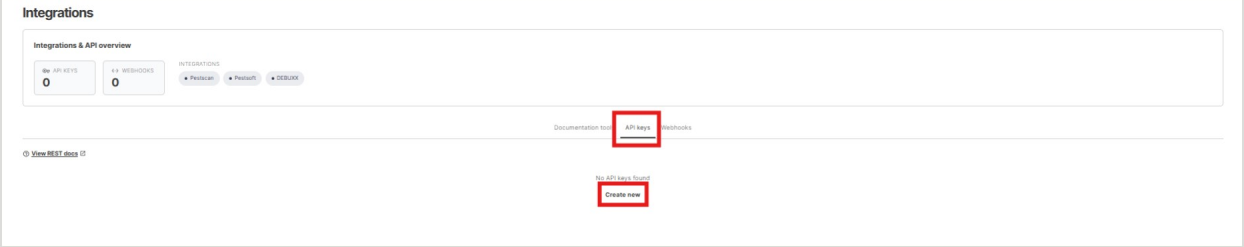

Expand info note → Enter details → Save

1 Create an API key — "API keys" tab

Under "Integrations", open the "API keys" tab and click "Create new". You can create as many **API keys** as you need.

Integrations → API keys → Create new

2 Add the key to your documentation tool

Copy the **API key** you created and paste it into your documentation tool.

> ! **Where the key is entered is defined by the tool's provider.** Please ask the provider of your documentation tool directly.

3 Create a webhook — "Webhooks" tab

Webhooks are created the same way as API keys: open the "Webhooks" tab, create a new entry and add it to your documentation tool (step 2). There is no limit on the number of **webhooks** either.

Integrations → Webhooks → Create new

COSTS

As soon as an interface is active, **€0.10 per device per month** is charged. This applies to all devices added after 1 January 2025.
